Body Stockings

Body stockings are an excellent solution providing extra security for keeping a containment product in place. They are to be used alongside a fixation product for the 2 piece system.

All Abena body stockings are made out of 92% cotton and 8% elastane, making them soft and breathable. These garments are fully washable at 60°C and can be tumble dried at a low temperature. Please note these garments may shrink by 10% upon the first wash.

Measurements are based on the hip, waist and chest (the widest measurement should be used). There are two styles available, both designs feature popper fasteners in between the legs and do not have sleeves.

Body stockings may be considered for use for those patients that have a tendency to remove containment products.

Please note: body stockings are to be used alongside fixation pants when using the two piece system.

WASHING SYMBOLS
